ABOUT ME

Product-minded Senior Frontend Engineer with 12+ years of experience scaling products from early-stage MVPs to production-grade platforms, including a fintech I joined as a founding engineer that grew to 50,000+ users and 20M+ financial transactions. Currently building a React Native fintech platform serving 10M+ users across Latin America.

I combine hands-on React/TypeScript expertise with strong ownership in architecture, system design, and delivery: shipping native iOS/Android apps with Capacitor, building white-label platforms, and mentoring engineers to senior level. I work closely with product and backend teams, contribute to hiring, and establish standards that help teams ship with confidence.

EXPERIENCE

Senior Frontend Engineer

Cashea

Remote

Jan 2026 - Present

Building a React Native fintech platform for transfers, currency exchange, and cross-border remittances, serving 10M+ users across Latin America.

- Contribute to component architecture, rendering performance, and the GraphQL data layer in production.
- Built a Storybook-powered component library from the design system in Figma, published as an internal package and consumed across multiple projects.
- Write unit tests with Jest across the codebase, occasionally contributing to backend services built with NestJS.

Principal Frontend Engineer / Engineering Lead

klio

Argentina

Jun 2017 - Jan 2026

Joined as a founding engineer; led frontend architecture and engineering practices, managing a cross-functional team of 8 (frontend, backend, and QA) and partnering closely with product stakeholders.

- Scaled the platform from early-stage MVP to a production-grade financial system processing 20M+ transfers for 50,000+ active users.
- Took the core web product from desktop-only to fully responsive, then shipped native iOS and Android apps with Capacitor, integrating biometric auth, push notifications, and other native APIs, and owning the full release cycle on the App Store and Google Play.
- Designed and shipped a POS payment app supporting contactless, chip, and magnetic stripe payments, running React + Redux on payment hardware via Capacitor with native Java/Kotlin integrations.
- Transformed the platform into a white-label product with configurable branding, theming, language, and regional localization, enabling multiple client brands from a single codebase.
- Reduced bundle size by 50% through lazy loading and native code replacements, and implemented an offline-first caching strategy that eliminated loading spinners and made app startup feel immediate.
- Interviewed 30+ candidates, hired 8, and mentored junior engineers through to senior-level promotions.

Software Developer Engineer

intive

Argentina

May 2016 - Jun 2017

Contributed to the development of production web applications for multiple clients, working across the full stack with a strong focus on frontend architecture, component-based UIs, and API integrations within distributed teams.

Full Stack Developer

Quadion Technologies

Argentina

Aug 2015 - May 2016

Worked as a full-stack developer building and maintaining production web applications, contributing across frontend, backend, APIs, and database design.

SKILLS

Frontend Architecture · Technical Leadership · Performance Optimization · Design Systems · React · TypeScript · React Native · PWA

EDUCATION

FASTA University, Argentina

Computer Science Engineer

2007 - 2014

LANGUAGES

English (Professional working proficiency) · Spanish (Native)
